Experience

Full Stack Developer Jan 2026 – Present
Synonyms Online Pvt. Ltd. *Janakpuri, Delhi*

- **Access control (React, TypeScript):** Rebuilt the admin authorization layer across 104 modules with backend grant codes, OWN/ALL record scope and route/control gates matching Spring Boot `@PreAuthorize`; replaced ∼820 lines of hardcoded config with a backend-driven sidebar.
- **Approval workflow:** Extended maker-checker approvals across admin modules with revision history and change diffs; moved 127 edit screens onto shared hooks and cut approval-queue API calls from ∼51 to 1.
- **Consultation service (Laravel):** Only web developer for the first 3 months, running 3 repositories alongside 2 mobile devs; built row-locked session transitions, multi-astrologer fan-out, no-show handling and per-minute billing; fixed a webhook double credit and an ∼80× earnings error.
- **API security:** Replaced raw SQL with parameterised queries, added IDOR ownership checks and stopped exception leakage across the consultation API; localised it in English and Hindi.
- **AI support bot (Node.js, GPT-4o mini):** Cut prompt size per model turn from 31k to 14.5–21k tokens and raised OpenAI prompt-cache hits from 0% to ∼91% (∼65–70% lower per-turn cost by token pricing); greetings, FAQs and off-topic text now skip the model.
- **Customer website & astrologer portal (Next.js):** Built booking and consultation flows, a Razorpay wallet with in-session top-up and a provider-agnostic chat layer (Firebase, CometChat); built the astrologer portal from scratch with a BFF proxy, OTP login and Vitest/Playwright tests.
- **Astrologer finance admin:** Built wallet ledgers, a withdrawal state machine, a commission/star-tier engine with dry-run, and before/after audit logs.
- **Gurukul LMS (in development, Moodle 5.3):** Sole developer, building an astrology academy entirely as Moodle plugins with core untouched; Google OAuth2, Zoom live classes and recordings, and a branded Boost child theme.

Front End Development Intern April 2024 – July 2024
Softsource Technolabs *Remote*

- Built 3+ responsive React.js/Tailwind pages, cutting page load latency by 15%, and integrated REST APIs with backend teams.

Projects

hinglish-profanity | *TypeScript, Java 17, Vitest, Gradle, GitHub Actions* October 2026

- Open-source profanity detector for English, Devanagari Hindi and romanized Hinglish, published to npm and Maven Central; zero runtime dependencies, 27 KB, ESM + CJS.
- Built a 6-stage normalizer and matcher that catch spaced, leetspeak, masked and elongated variants with offsets mapped back to the original text; matching Devanagari before transliteration stops false hits on words like “land”.
- Test-first on a 122-case corpus of real reviews: 360 tests, 0 false positives on 68 held-out reviews, 30/30 slur recall, ∼14.6k reviews/sec.
- Ported to Java with identical output, verified by ∼4,700 cross-language parity checks in CI across Node 18–24.

Education

KCC Institute of Technology and Management Greater Noida, UP
Bachelor of Technology in Computer Science Engineering *2021 – 2025*

Technical Skills

Languages: TypeScript, JavaScript, PHP, Java, Python, SQL, HTML/CSS
Frameworks: React.js, Next.js, Node.js, Laravel, Spring Boot, Moodle, FastAPI, Tailwind CSS, RTK Query, Zustand
Data & Integrations: PostgreSQL, MongoDB, Firebase, Razorpay, Agora, CometChat, Zoom API, OpenAI API
Cloud & Tooling: AWS (S3, EC2), Docker, GitHub Actions, GitLab, Gradle, Vercel, Vitest, Playwright, Claude Code, Cursor
